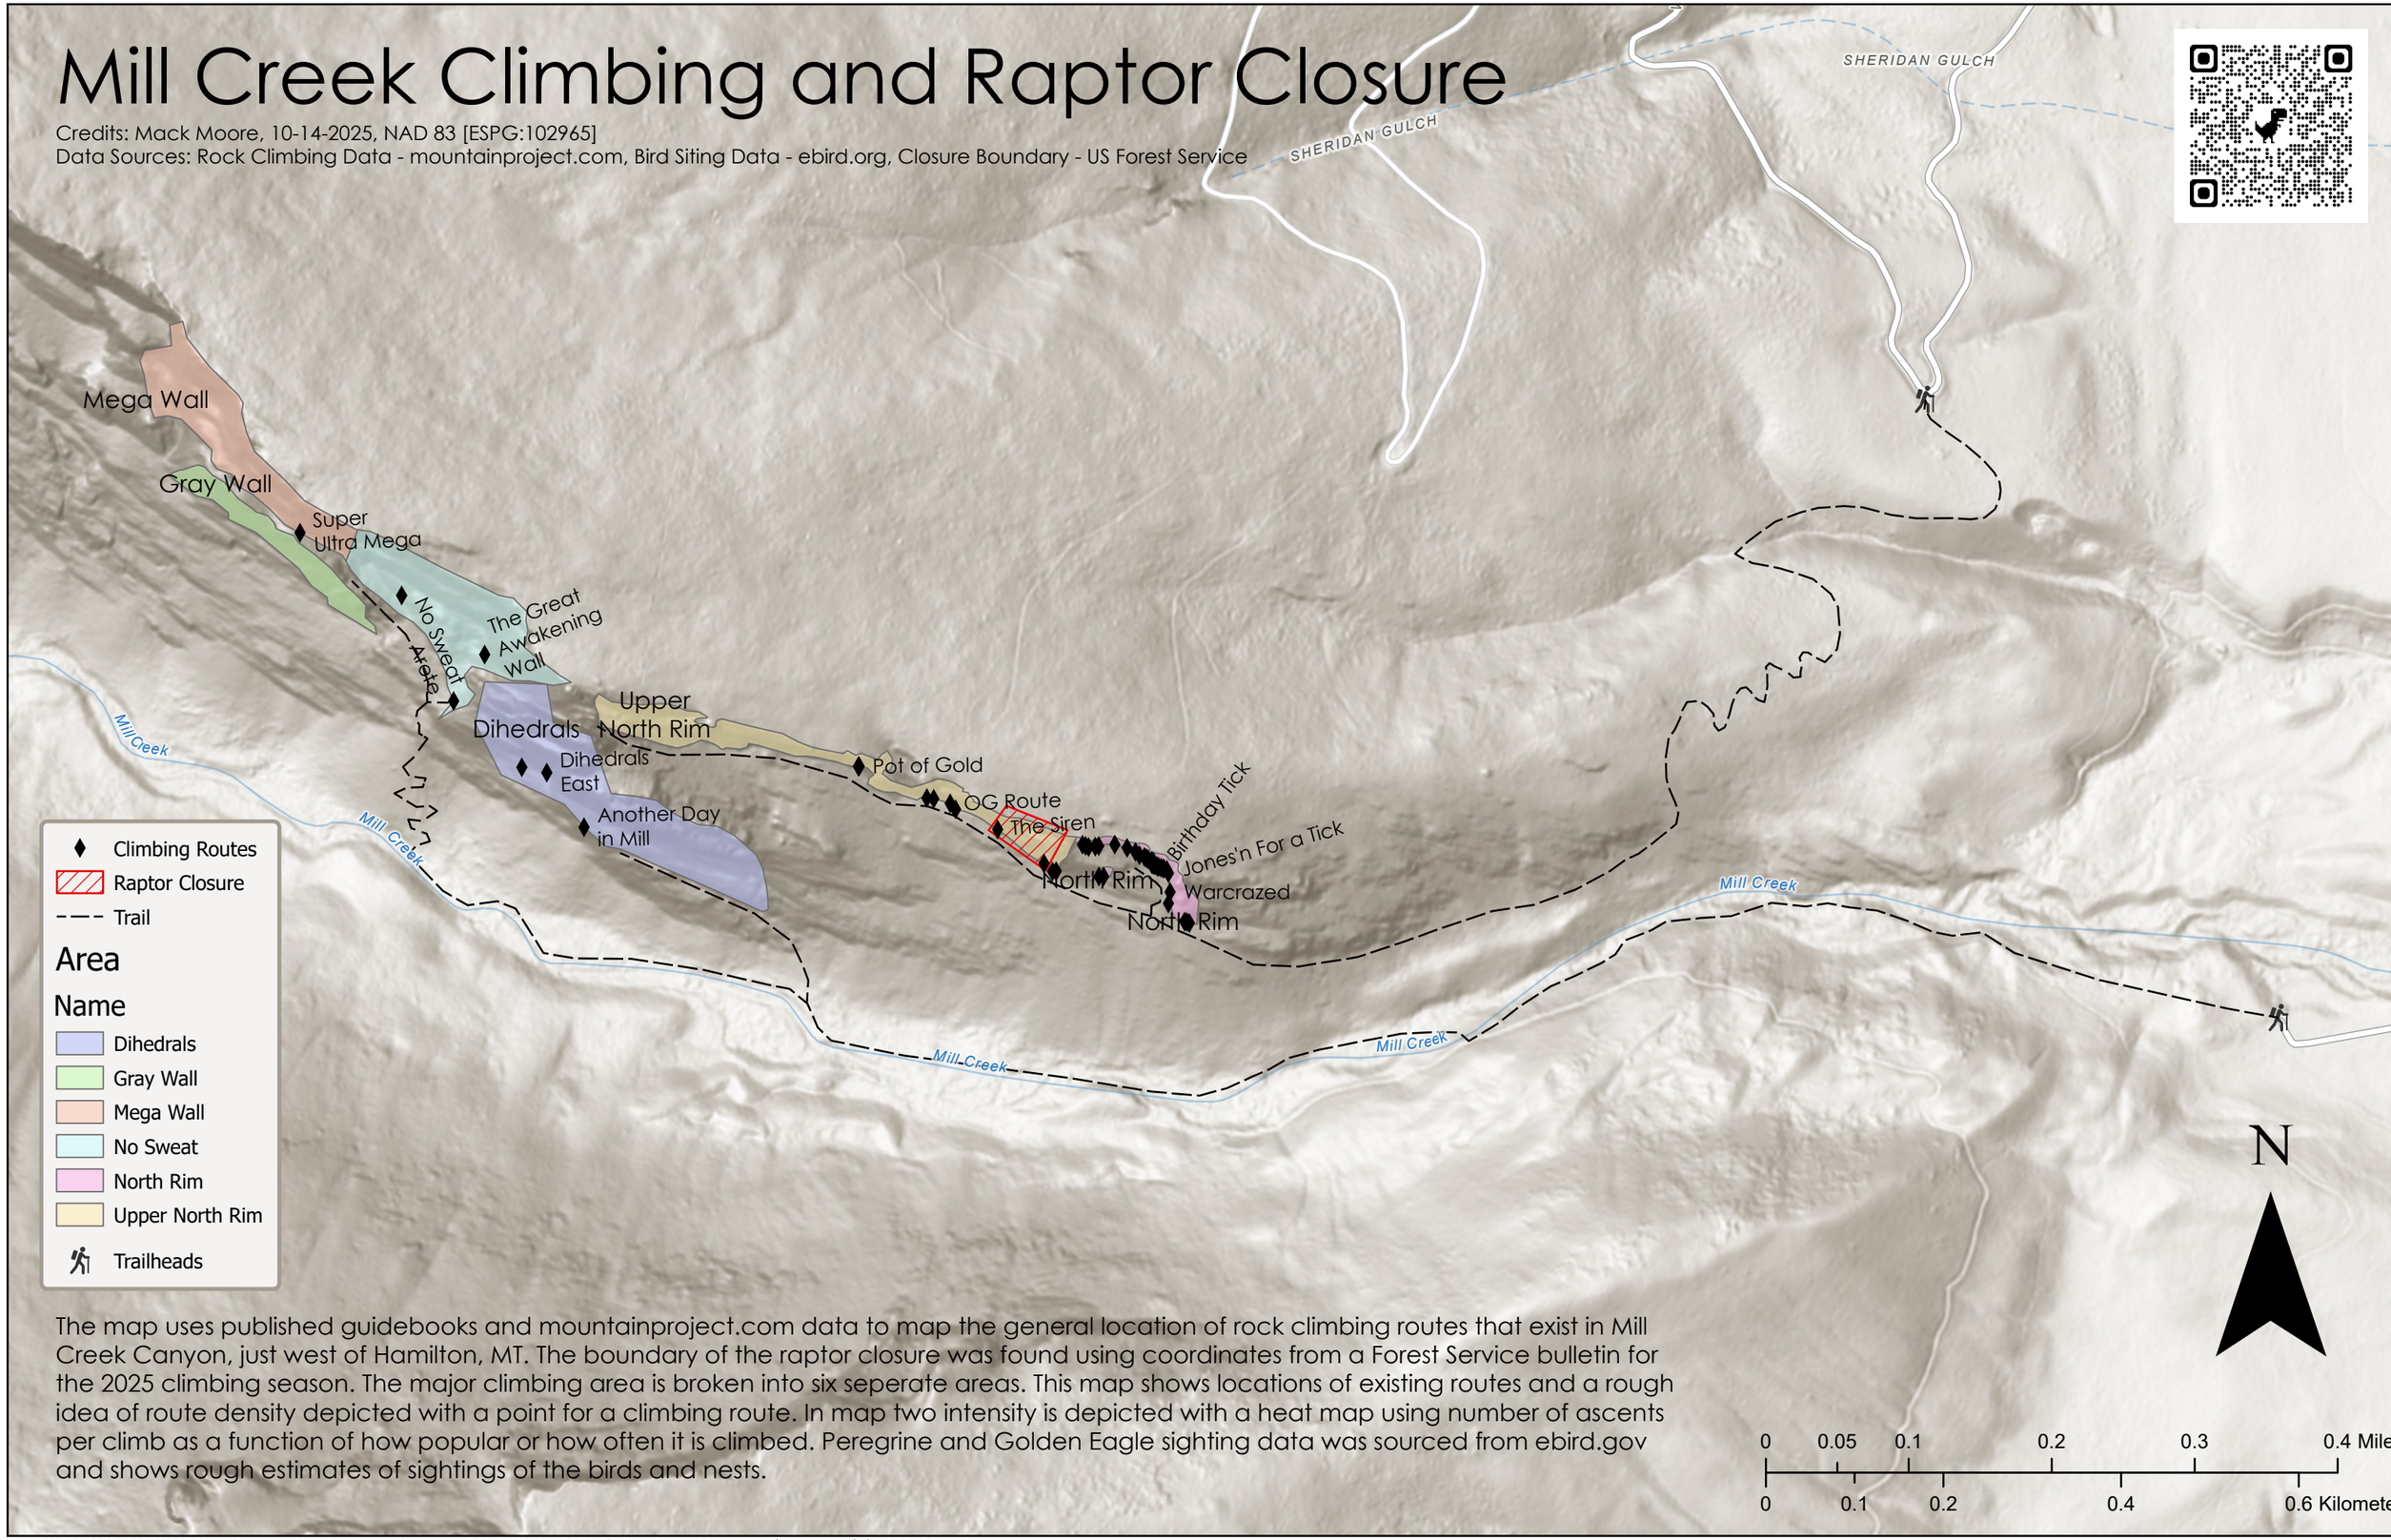
Data Sources: Rock Climbing Data - mountainproject.com, Bird Siting Data - ebird.org, Closure Boundary - US Forest Service



The map uses published guidebooks and mountainproject.com data to map the general location of rock climbing routes that exist in Mill Creek Canyon, just west of Hamilton, MT. The boundary of the raptor closure was found using coordinates from a Forest Service bulletin for the 2025 climbing season. The major climbing area is broken into six seperate areas. This map shows locations of existing routes and a rough idea of route density depicted with a point for a climbing route. In map two intensity is depicted with a heat map using number of ascents per climb as a function of how popular or how often it is climbed. Peregrine and Golden Eagle sighting data was sourced from ebird.gov and shows rough estimates of sightings of the birds and nests.
